Problem Statement -

Problem Statement No.4: College Admission Agent (RAG Based)

The Challenge

Students often struggle to find accurate and up-to-date information about college admissions. Information regarding **courses, eligibility criteria, application procedures, fees, scholarships, deadlines, and required documents** is often scattered across different sources. Students may find it difficult to identify the information relevant to their preferred course and may receive incomplete or unreliable answers.

The Objective

Build an **AI-powered College Admission Agent** using **Retrieval-Augmented Generation (RAG)** that provides students with accurate, relevant, and knowledge-base-grounded information about the admission process. The solution should:

- **Course Information** – Provides details about available courses, branches, duration, and selection criteria.
- **Eligibility Verification** – Checks academic qualifications, marks, subjects, and entrance exam requirements.
- **Admission Process Guidance** – Provide a clear step-by-step explanation of the application, document submission, entrance examination, and admission process.
- **Fees & Scholarships** – Provide information about tuition fees, other applicable fees, and available scholarship opportunities.
- **Required Documents** – Provide a checklist of documents required for undergraduate admission.
- **Admission Deadlines** – Provide information about application deadlines, entrance examination dates, merit lists, and other important admission dates.
- **RAG-Based Question Answering** – Retrieve relevant information from the college knowledge base and generate grounded answers using **IBM Granite through watsonx.ai**.
- **User-Friendly Interface** – Provide an interactive **Streamlit-based chat interface** through which students can easily ask admission-related questions.

Proposed Solution -

Proposed Solution: AI-Powered College Admission Agent

The proposed solution is an **AI-powered College Admission Agent** built using **IBM watsonx.ai**, **IBM Granite Models**, **RAG**, and **Streamlit** to provide students with accurate and relevant admission guidance.

At its core, the system uses a **Retrieval-Augmented Generation (RAG)** pipeline to retrieve relevant information from the college knowledge base. The retrieved information is provided to the **IBM Granite model** to generate grounded and reliable answers.

The system provides the following key features:

- **Course Information** – Provides details about available courses, branches, duration, and selection criteria.
- **Eligibility Verification** – Provides information about academic qualifications, required subjects, minimum marks, and entrance examination requirements.
- **Admission Process Guidance** – Guides students through the application, document submission, entrance examination, and admission process.
- **Fees & Scholarships** – Provides information about tuition fees, other fees, and available scholarships.
- **Required Documents** – Provides a checklist of documents required for admission.
- **Admission Deadlines** – Provides important application and admission dates.
- **RAG-Based Question Answering** – Retrieves relevant information from the knowledge base and generates grounded answers using **IBM Granite through watsonx.ai**.
- **Source References** – Displays the knowledge-base sources used to generate each answer.

The solution includes a **user-friendly Streamlit interface** where students can ask admission-related questions and receive accurate, knowledge-base-grounded responses.

Overall, the proposed solution provides an **end-to-end AI-powered college admission assistant** that simplifies the admission process by giving students reliable information through RAG-based question answering.

Technology Used

- **IBM Bob platform** – For designing and developing the College Admission Agent workflow and project components.
- **IBM Granite Model** – For natural language understanding, reasoning, and generating student-friendly admission responses.
- **IBM Cloud** – Provides the cloud infrastructure required to build, deploy, and run the College Admission Agent securely and reliably.
- **RAG (Retrieval-Augmented Generation)** – Used to **retrieve relevant admission information from the knowledge base first and then generate answers**, making responses more accurate and grounded.
- **IBM watsonx.ai** – Used for accessing and configuring the IBM Granite model and supporting AI-powered response generation.
- **Vector Search / Vector Store (TF-IDF)** – Used to find the most relevant information from the admission knowledge base based on the student's question.
- **Streamlit** – Used to build the interactive web dashboard through app.py, where students can ask admission-related questions and view the agent's responses.

Required Files created using IBM bob -

The screenshot displays the Visual Studio Code interface for a project named 'College-Admission-Agent'. The Explorer sidebar on the left shows the project structure, including files like `settings.json`, `knowledge_base`, `rag`, `.env`, `.env.example`, `.gitignore`, `admission_agent.py`, `app.py`, `config.py`, `README.md`, and `requirements.txt`.

The main editor window shows the file `admission_process.txt` with the following content:

```
1+ ADMISSION PROCESS – ABC Institute of Technology
2+ =====
3+
4+
5+ B.TECH ADMISSION PROCESS
6+ =====
7+
8+ Step 1 – Entrance Exam
9+   - Appear in JEE Main (conducted by NTA).
10+  - Obtain a valid JEE Main score / percentile.
11+
12+ Step 2 – Online Registration
13+   - Visit the official admission portal: admissions.abctech.edu.in
14+   - Register using a valid email address and mobile number.
15+   - Pay the registration fee of INR 500 (non-refundable) online.
16+
17+ Step 3 – Fill the Application Form
18+   - Fill in personal details, academic details, and preferred branches.
19+   - Upload scanned copies of required documents (see documents_required.txt).
20+   - Submit the completed application form before the deadline.
21+
22+ Step 4 – Merit List and Counselling
23+   - A merit list is prepared based on JEE Main score, category, and seat availability.
24+   - Shortlisted candidates are called for online / offline counselling.
25+   - During counselling, candidates choose their preferred branch based on rank and availability.
26+
27+ Step 5 – Seat Allotment
28+   - Seat allotment letters are issued after counselling.
29+   - Candidates must accept the allotted seat within the stipulated time by paying the seat acceptance fee.
30+
31+ Step 6 – Document Verification
32+   - Report to the institute on the specified date for original document verification.
33+   - Bring all original documents along with attested photocopies.
34+
35+ Step 7 – Fee Payment and Enrolment
36+   - Pay the full semester fee as per the fee structure.
37+   - Collect the enrolment number and student ID card.
```

The right sidebar shows the 'IBM BOB' interface. It includes a 'Pasted text #1 - 143 lines' window, a 'Todo List' with 11/17 items, and a file change summary at the bottom. The 'Todo List' items are:

- Create config.py
- Create admission_agent.py
- Create app.py (Streamlit UI)
- Create requirements.txt
- Create README.md
- Create .gitignore (completed via shell)
- Review and validate all files for correctness
- Update config.py with watsonx variables
- Create .env.example with placeholder values
- Add .env to .gitignore
- Update admission_agent.py — replace extractive ans...
- Update requirements.txt — add ibm-watsonx-ai and p...
- Update README.md — document watsonx integration...
- Syntax-check and validate all changed files

The file change summary at the bottom shows:

- courses.txt +81 -0
- admission_process.txt +81 -0
- eligibility.txt +77 -0
- fee_structure.txt +95 -0
- scholarships.txt +113 -0

21 files changed. Buttons for 'Undo all' and 'Show all' are present.

IBM Bob Screenshots:

The screenshot displays the IBM Bob IDE interface for a project named "College-Admission-Agent". The interface is divided into several panels:

- EXPLORER (Left):** Shows the project structure. The "rag" directory is expanded, listing files such as `__init__.py`, `document_loader.py`, `embeddings.py`, `retriever.py`, `text_splitter.py`, and `vector_store.py`. Other files in the project include `admission_process.txt`, `courses.txt`, `deadlines.txt`, `documents_required.txt`, `eligibility.txt`, `faq.txt`, `fee_structure.txt`, `hostel_info.txt`, `scholarships.txt`, `.env`, `.env.example`, `.gitignore`, `admission_agent.py`, `app.py`, `config.py`, `README.md`, and `requirements.txt`.
- Central Panel:** Features a large icon of a robot wearing a blue hard hat and a white shirt with a blue code symbol. Below the icon are three buttons: "Show All Commands" (Ctrl + Shift + P), "Toggle Terminal" (Ctrl + `), and "Start Debugging" (F5).
- Right Panel:** Contains a "Todo List" with 11 tasks. The current task is "Create .env.example with placeholder values". Below the list is a code editor showing a snippet of Python code:

```
215         return llm_answer
216
217         # --- Fallback: context-extraction
218         return self._build_extractive_answer
219
220     def _build_extractive_answer(
221         self, question: str, chunks: List[
```

The bottom status bar shows "0 Bob Findings" and "ADK: X Bob Settings".

Architecture blueprint for IBM bob:

Role of Agentic AI College Admission Agent

- **Agentic AI** enables the College Admission Agent to function as an intelligent system rather than a simple chatbot.
- Using **IBM watsonx.ai** and **IBM Granite models**, the agent retrieves relevant admission information and generates accurate context-aware responses for students.
- The agent performs specialized tasks such as **retrieving admission policies, checking eligibility criteria, providing course and fee information, explaining application procedures, and answering frequently asked questions.**
- The **RAG-based approach** allows the agent to retrieve relevant information from the college knowledge base before generating an answer.
- AI makes the College Admission Agent **intelligent, responsive, knowledge-grounded, and student-focused**, acting as a smart digital admission assistant that helps students navigate the college admission process efficiently.

The screenshot displays the IBM watsonx Orchestrator interface for the 'College Admission Agent'. The top navigation bar includes 'English', 'Contact Sales', 'Buy Now', and a '27 trial days left' indicator. The main interface is divided into a left sidebar with 'Draft' and 'Live' tabs, and a central workspace. The 'Live' tab is active, showing the agent's version (v2), last deployment (04:52 PM GMT+5:30 on 09/08/2026), and a description: 'An AI-powered College Admission Assistant that helps students with course selection, eligibility criteria, admission procedures, required documents, fee information, important dates, and frequently asked questions using a trusted admission knowledge base.' The agent's status is 'Live'. Below this, the 'Behavior' section shows the model 'groq/openai/gpt-oss-120b' and a description: 'An AI-powered College Admission Assistant that helps students with course selection, eligibility criteria, admission procedures, required documents, fee information, important dates, and frequently asked questions using a trusted admission knowledge base.' The instructions state: 'You are a College Admission Assistant. Your purpose is to help prospective students understand the college admission process. Answer questions about: Courses and programs.' The right sidebar shows the 'Live Preview' section, which is currently in 'debug mode'. It displays a message: 'Below is the fee information that is available in the institute's fee_structure.txt file. Fees are shown in Indian Rupees (INR) and are subject to revision by the institute.' Below this, a table titled '1. B.Tech (Under-graduate) - Per Semester' shows fee information for different branch groups. The table has columns for 'Branch Group', 'Tuition Fee', 'Examination Fee', and 'Approx. Total (per semester)'. The data rows are: 'CSE / IT' with Tuition Fee of INR 65,000, Examination Fee of INR 2,500, and Approx. Total of INR 70,500; and 'Other B.Tech branches (ECE, EE, ME, CE, ChE)' with Tuition Fee of INR 60,000, Examination Fee of INR 2,500, and Approx. Total of INR 65,500. Below the table, there is a section for 'Additional recurring charges (annual, paid once a year):' with a table showing 'Development Fee' of INR 10,000 and 'Library Fee' of INR 2,000. At the bottom, there is a text input field with the placeholder 'Type something...' and a 'Send' button.

Branch Group	Tuition Fee	Examination Fee	Approx. Total (per semester)
CSE / IT	INR 65,000	INR 2,500	INR 70,500
Other B.Tech branches (ECE, EE, ME, CE, ChE)	INR 60,000	INR 2,500	INR 65,500

Fee	Amount (per year)
Development Fee	INR 10,000
Library Fee	INR 2,000

Novelty and Uniqueness

The **proposed purpose of the College Admission Agent** is to automate and streamline the student enrollment inquiry process using artificial intelligence.

- **RAG-Powered Contextual Awareness:** Unlike traditional rule-based chatbots, this agent uses **Retrieval-Augmented Generation (RAG)** via **IBM Watsonx.ai**, ensuring answers are dynamically fetched from the latest dynamic knowledge base.
- **Powered by IBM Watsonx.ai & Granite LLM:** The core intelligence of this agent leverages enterprise-grade **IBM Granite** Large Language Models (LLMs) via the watsonx infrastructure. This enables the assistant to grasp complex natural language queries, understand student intent, and deliver contextual, human-like responses.
- **Strict Hallucination Control:** Built with advanced guardrails that prevent the LLM from making up incorrect data. It strictly replies with "Information not available" for out-of-scope queries.
- **Seamless Enterprise-Grade Integration:** Combines local python backend data parsing (Streamlit/LangChain) directly with enterprise-grade **IBM Granite** LLM infrastructure.
- **Intelligent Query Suggestion:** The frontend features automated, predictive chip buttons based on high-frequency student admission FAQs to guide user interaction instantly.

Git Hub Link

Repository – College Admission Agent

Git Hub Link URL : [sujatham25/College-Admission-Agent](https://github.com/sujatham25/College-Admission-Agent)

Future Scope:

1. **Multilingual and Voice Assistant Support:**

Integrating voice-to-text and text-to-speech capabilities to allow students to speak their queries instead of typing.

2. **Omnichannel Integration (WhatsApp & Social Media):**

Deploying the IBM Watsonx agent across highly accessible channels such as WhatsApp, Telegram, and Facebook Messenger. This ensures students can get admission details instantly on their phones without visiting the website.

3. **End-to-End Application Tracking:**

- Upgrading the agent to connect with the college's backend database. This will enable students to not only ask general questions but also securely log in and check their real-time application status, seat allotment, and document verification progress.

4. **Interactive Campus Virtual Tour Integration:**

- Integrating the AI agent with a 3D virtual tour or AR (Augmented Reality) maps of the campus, helping long-distance applicants explore hostel facilities, labs, and classrooms through interactive chat prompts.

5. **Predictive Admission Analytics for Management:**

- Using historical conversation data and student search patterns to provide analytics to the college management. This will help the institution predict course demand, identify common student concerns, and optimize future admission strategies.
